

Share Buyback/Issuance Model (SHB)

Share Buyback/Issuance, which measures the percent change in shares outstanding from 12 months ago, was introduced in 1995. Companies with a shrinking number of shares outstanding have consistently produced good excess returns with low volatility and good performance in down markets. A reduction in shares due to repurchases may result from positive company performance factors such as high internal rate of return or excess cash flow. A lower share base leads to increased earnings per share. Ford considers companies with a Share Buyback/Issuance measure of -1% or less to be buy candidates while those with increases of 20% or more in their shares outstanding are typically poor performers.

2006	1.5
2007	2.3

Performance is based on ranking the Ford Universe into groups of stocks that have Share Buyback/Issuance < -5%, -5 to -1%, -1 to 20% and > 20% each month. The group returns represent equal-dollar investments in each stock each month, with monthly total returns linked to create annual and annualized results. Total returns, which sum month-end price changes and 1/12 of companies' indicated annual dividend rates, exclude transaction costs and management fees. The Ford Universe comprised 4000 companies in early 2001, 4500 in August 2001, and 4425 at the end of 2007.

Quantitative model results are affected by market environment and are based on historical financial data. Certain material information for a company may not be reflected in models presented. The performance shown is based on large portfolios and may not be effective on every security. There is no assurance that future results will duplicate past results.
